

0x06. C - More pointers, arrays and strings

C

By: Julien Barbier

Weight: 1

Project over - took place from Oct 18, 2023 6:00 AM to Oct 20, 2023 6:00 AM

☒ An auto review will be launched at the deadline

In a nutshell...

- **Auto QA review:** 44.75/57 mandatory & 23.4/46 optional
- **Altogether: 118.45%**
 - Mandatory: 78.51%
 - Optional: 50.87%
 - Calculation: $78.51\% + (78.51\% * 50.87\%) == 118.45\%$

Concepts

For this project, we expect you to look at this concept:

- Struggling with the sandbox? Try this: Using Docker & WSL on your local host (/concepts/100039)

Learning Objectives

At the end of this project, you are expected to be able to explain to anyone (/rltoken/tkwwPs3MT3JT07FSsmXy-A), **without the help of Google**:

General

- What are pointers and how to use them
- What are arrays and how to use them
- What are the differences between pointers and arrays
- How to use strings and how to manipulate them
- Scope of variables

Copyright - Plagiarism

- You are tasked to come up with solutions for the tasks below yourself to meet with the above learning objectives.
- You will not be able to meet the objectives of this or any following project by copying and pasting someone else's work.
- You are not allowed to publish any content of this project.
- Any form of plagiarism is strictly forbidden and will result in removal from the program.

Requirements

General

- Allowed editors: `vi` , `vim` , `emacs`
- All your files will be compiled on Ubuntu 20.04 LTS using `gcc` , using the options `-Wall -Werror -Wextra -pedantic -std=gnu89`
- All your files should end with a new line
- A `README.md` file, at the root of the folder of the project is mandatory
- Your code should use the `Betty` style. It will be checked using `betty-style.pl` (<https://github.com/alx-tools/Betty/blob/master/betty-style.pl>) and `betty-doc.pl` (<https://github.com/alx-tools/Betty/blob/master/betty-doc.pl>)
- You are not allowed to use global variables
- No more than 5 functions per file
- You are not allowed to use the standard library. Any use of functions like `printf` , `puts` , etc... is forbidden
- You are allowed to use `_putchar` (https://github.com/alx-tools/_putchar.c/blob/master/_putchar.c)
- You don't have to push `_putchar.c` , we will use our file. If you do it won't be taken into account
- In the following examples, the `main.c` files are shown as examples. You can use them to test your functions, but you don't have to push them to your repo (if you do we won't take them into account). We will use our own `main.c` files at compilation. Our `main.c` files might be different from the one shown in the examples
- The prototypes of all your functions and the prototype of the function `_putchar` should be included in your header file called `main.h`
- Don't forget to push your header file

(/)

Quiz questions

Great! You've completed the quiz successfully! Keep going! ([Hide quiz](#)).

Question #0

```
var = "Best";
```

What is the type of var ?

- ☒ char *
- ☐ string
- ☐ int *

Question #1

Why is it important to reserve enough space for an extra character when declaring/allocating a string?

- ☐ For memory alignment
- ☐ In case we need one
- ☒ For the null byte (end of string)
- ☐ For fun

Question #2

What is/are the difference(s) between the two following variables? (Except their names)

```
char *s1 = "";  
char *s2 = NULL;
```

- ☒ The first one can be dereferenced, not the second one
- ☐ They are the same
- ☒ The first one points to a 0-byte, the second one points to 0
- ☐ The second one can be dereferenced, not the first one
- ☐ The first one points to 0, the second one points to a 0-byte

Question #3

What happens when one tries to dereference a pointer to NULL?

(/)

☒ Segmentation fault

☐ Nothing

☐ Kernel panic

☐ World War Z

Question #4

What is wrong with the following code?

```
int n = 5;
int array[10];
int i = 3;

array[n] = i;
```

☐ It is impossible to declare the variable `array` this way

☒ Nothing is wrong

☐ The array `array` is not entirely initialized

☐ It is not possible to access `array[n]`

Question #5

What is wrong with the following code?

```
int n = 5;
int array[5];
int i = 3;

array[n] = i;
```

☐ It is impossible to declare the variable `array` this way

☐ Nothing is wrong

☐ The array `array` is not entirely initialized

☒ It is not possible to access `array[n]`

Question #6

What is wrong with the following code?

```
int n = 5;  
int array[n];  
int i = 3;  
  
array[n] = i;
```

- ☒ It is impossible to declare the variable `array` this way
- ☐ Nothing is wrong
- ☐ The array `array` is not entirely initialized
- ☐ It is not possible to access `array[n]`

Tasks

0. strcat

mandatory

Score: 100.0% (Checks completed: 100.0%)

Write a function that concatenates two strings.

- Prototype: `char *_strcat(char *dest, char *src);`
- This function appends the `src` string to the `dest` string, overwriting the terminating null byte (`\0`) at the end of `dest` , and then adds a terminating null byte
- Returns a pointer to the resulting string `dest`

FYI: The standard library provides a similar function: `strcat` . Run `man strcat` to learn more.

```

julien@ubuntu:~/0x06$ cat 0-main.c
#include "main.h"
#include <stdio.h>

/**
 * main - check the code
 *
 * Return: Always 0.
 */
int main(void)
{
    char s1[98] = "Hello ";
    char s2[] = "World!\n";
    char *ptr;

    printf("%s\n", s1);
    printf("%s", s2);
    ptr = _strcat(s1, s2);
    printf("%s", s1);
    printf("%s", s2);
    printf("%s", ptr);
    return (0);
}
julien@ubuntu:~/0x06$ gcc -Wall -pedantic -Werror -Wextra -std=gnu89 0-main.c 0-strcat.c -o 0-strcat
julien@ubuntu:~/0x06$ ./0-strcat
Hello
World!
Hello World!
World!
Hello World!
julien@ubuntu:~/0x06$

```

1. strncat

mandatory

Score: 100.0% (Checks completed: 100.0%)

Write a function that concatenates two strings.

- Prototype: char *_strncat(char *dest, char *src, int n);

- The `_strncat` function is similar to the `_strcat` function, except that
 - it will use at most `n` bytes from `src`; and
 - `src` does not need to be null-terminated if it contains `n` or more bytes
- Return a pointer to the resulting string `dest`

FYI: The standard library provides a similar function: `strncat`. Run `man strncat` to learn more.

```
julien@ubuntu:~/0x06$ cat 1-main.c
#include "main.h"
#include <stdio.h>

/**
 * main - check the code
 *
 * Return: Always 0.
 */
int main(void)
{
    char s1[98] = "Hello ";
    char s2[] = "World!\n";
    char *ptr;

    printf("%s\n", s1);
    printf("%s", s2);
    ptr = _strncat(s1, s2, 1);
    printf("%s\n", s1);
    printf("%s", s2);
    printf("%s\n", ptr);
    ptr = _strncat(s1, s2, 1024);
    printf("%s", s1);
    printf("%s", s2);
    printf("%s", ptr);
    return (0);
}
julien@ubuntu:~/0x06$ gcc -Wall -pedantic -Werror -Wextra -std=gnu89 1-main.c 1-strncat.c -o 1-strncat
julien@ubuntu:~/0x06$ ./1-strncat
Hello
World!
Hello w
World!
Hello w
Hello wWorld!
World!
Hello wWorld!
julien@ubuntu:~/0x06$
```

QA Review

2. strncpy

mandatory

Score: 100.0% (Checks completed: 100.0%)

Write a function that copies a string.

- Prototype: `char *_strncpy(char *dest, char *src, int n);`
- Your function should work exactly like `strncpy`

FYI: The standard library provides a similar function: `strncpy`. Run `man strncpy` to learn more.

julien@ubuntu:~/0x06\$ cat 2-main.c

```
#include "main.h"
```

```
#include <stdio.h>
```

```
/**
```

```
 * main - check the code
```

```
 *
```

```
 * Return: Always 0.
```

```
 */
```

```
int main(void)
```

```
{
```

```
    char s1[98];
```

```
    char *ptr;
```

```
    int i;
```

```
    for (i = 0; i < 98 - 1; i++)
```

```
    {
```

```
        s1[i] = '*';
```

```
    }
```

```
    s1[i] = '\0';
```

```
    printf("%s\n", s1);
```

```
    ptr = _strncpy(s1, "First, solve the problem. Then, write the code\n", 5);
```

```
    printf("%s\n", s1);
```

```
    printf("%s\n", ptr);
```

```

4. I am a kind of paranoid in reverse. I suspect people of plotting to make me happy

mandatory

Score: 65.0% (Checks completed: 100.0%)

Write a function that reverses the content of an array of integers.

- Prototype: `void reverse_array(int *a, int n);`
- Where `n` is the number of elements of the array

```

julien@ubuntu:~/0x06$ cat 4-main.c
#include "main.h"
#include <stdio.h>

/**
 * main - check the code
 * @a: an array of integers
 * @n: the number of elements to swap
 *
 * Return: nothing.
 */
void print_array(int *a, int n)
{
    int i;

    i = 0;
    while (i < n)
    {
        if (i != 0)
        {
            printf(", ");
        }
        printf("%d", a[i]);
        i++;
    }
    printf("\n");
}

/**
 * main - check the code
 *
 * Return: Always 0.
 */
int main(void)
{
    int a[] = {0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 98, 1024, 1337};

    print_array(a, sizeof(a) / sizeof(int));
    reverse_array(a, sizeof(a) / sizeof(int));
    print_array(a, sizeof(a) / sizeof(int));
    return (0);
}
julien@ubuntu:~/0x06$ gcc -Wall -pedantic -Werror -Wextra -std=gnu89 4-main.c 4-rev_
array.c -o 4-rev_array
julien@ubuntu:~/0x06$ ./4-rev_array
0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 98, 1024, 1337
1337, 1024, 98, 9, 8, 7, 6, 5, 4, 3, 2, 1, 0
julien@ubuntu:~/0x06$

```

- GitHub repository: alx-low_level_programming
- (/). Directory: 0x06-pointers_arrays_strings

☒ Done![Help](#)[Check your code](#)[>_ Get a sandbox](#)[QA Review](#)

5. Always look up

mandatory

Score: 65.0% (Checks completed: 100.0%)

Write a function that changes all lowercase letters of a string to uppercase.

- Prototype: `char *string_toupper(char *);`

```
julien@ubuntu:~/0x06$ cat 5-main.c
#include "main.h"
#include <stdio.h>

/**
 * main - check the code
 *
 * Return: Always 0.
 */
int main(void)
{
    char str[] = "Look up!\n";
    char *ptr;

    ptr = string_toupper(str);
    printf("%s", ptr);
    printf("%s", str);
    return (0);
}
julien@ubuntu:~/0x06$ gcc -Wall -pedantic -Werror -Wextra -std=gnu89 5-main.c 5-string_toupper.c -o 5-string_toupper
julien@ubuntu:~/0x06$ ./5-string_toupper
LOOK UP!
LOOK UP!
julien@ubuntu:~/0x06$
```

6. Expect the best. Prepare for the worst. Capitalize on what comes

mandatory

Score: 65.0% (Checks completed: 100.0%)

Write a function that capitalizes all words of a string.

- Prototype: `char *cap_string(char *)`;
- Separators of words: space, tabulation, new line, `,`, `;`, `!`, `?`, `"`, `(`, `)`, `{`, and `}`

```
julien@ubuntu:~/0x06$ cat 6-main.c
#include "main.h"
#include <stdio.h>

/**
 * main - check the code
 *
 * Return: Always 0.
 */
int main(void)
{
    char str[] = "Expect the best. Prepare for the worst. Capitalize on what come
s.\nhello world! hello-world 0123456hello world\thello world.hello world\n";
    char *ptr;

    ptr = cap_string(str);
    printf("%s", ptr);
    printf("%s", str);
    return (0);
}
julien@ubuntu:~/0x06$ gcc -Wall -pedantic -Werror -Wextra -std=gnu89 6-main.c 6-cap_
string.c -o 6-cap
julien@ubuntu:~/0x06$ ./6-cap
Expect The Best. Prepare For The Worst. Capitalize On What Comes.
Hello World! Hello-world 0123456hello World Hello World.Hello World
Expect The Best. Prepare For The Worst. Capitalize On What Comes.
Hello World! Hello-world 0123456hello World Hello World.Hello World
julien@ubuntu:~/0x06$
```

Repo:

- Directory: `0x06-pointers_arrays_strings`
- File: `6-cap_string.c`

7. Mozart composed his music not for the elite, but for everybody

mandatory

Score: 65.0% (Checks completed: 100.0%)

Write a function that encodes a string into 1337 (/rltoken/9v9KfpvWnL0GoMu5mozbug).

- Letters a and A should be replaced by 4
- Letters e and E should be replaced by 3
- Letters o and O should be replaced by 0
- Letters t and T should be replaced by 7
- Letters l and L should be replaced by 1
- Prototype: `char *leet(char *)`;
- You can only use one `if` in your code
- You can only use two loops in your code
- You are not allowed to use `switch`
- You are not allowed to use any ternary operation

```
julien@ubuntu:~/0x06$ cat 7-main.c
#include "main.h"
#include <stdio.h>

/**
 * main - check the code for
 *
 * Return: Always 0.
 */
int main(void)
{
    char s[] = "Expect the best. Prepare for the worst. Capitalize on what come
s.\n";
    char *p;

    p = leet(s);
    printf("%s", p);
    printf("%s", s);
    return (0);
}
julien@ubuntu:~/0x06$ gcc -Wall -pedantic -Werror -Wextra -std=gnu89 7-main.c 7-lee

9. Numbers have life; they're not just symbols on paper

#advanced

Score: 65.0% (*Checks completed: 100.0%*)

Write a function that prints an integer.

- Prototype: `void print_number(int n);`
- You can only use `_putchar` function to print
- You are not allowed to use `long`
- You are not allowed to use arrays or pointers
- You are not allowed to hard-code special values

```
julien@ubuntu:~/0x06$ cat 101-main.c
#include "main.h"
```

```
/**
 * main - check the code
 *
 * Return: Always 0.
 */
```

```
int main(void)
```

```
{
    print_number(98);
    _putchar('\n');
    print_number(402);
    _putchar('\n');
    print_number(1024);
    _putchar('\n');
    print_number(0);
    _putchar('\n');
    print_number(-98);
    _putchar('\n');
    return (0);
}
```

```
julien@ubuntu:~/0x06$ gcc -Wall -pedantic -Werror -Wextra -std=gnu89 _putchar.c 101-  
main.c 101-print_number.c -o 101-print_numbers
```

```
julien@ubuntu:~/0x06$ ./101-print_numbers
```

```
98
```

```
402
```

```
1024
```

```
0
```

```
-98
```

```
julien@ubuntu:~/0x06$
```

10. A dream doesn't become reality through magic; it takes sweat, determination and hard work

#advanced

Score: 10.83% (Checks completed: 16.67%)

Add one line to this code (https://github.com/alx-tools/make_magic_happen/blob/master/magic.c), so that the program prints `a[2] = 98`, followed by a new line.

- You are not allowed to use the variable `a` in your new line of code
- You are not allowed to modify the variable `p`
- You can only write one statement
- You are not allowed to use `,`
- You are not allowed to code anything else than the line of expected line of code at the expected line
- Your code should be written at line 19, before the `;`
- Do not remove anything from the initial code (not even the comments)
- and don't change anything but the line of code you are adding (don't change the spaces to tabs!)
- You are allowed to use the standard library

11. It is the addition of strangeness to beauty that constitutes the romantic character in art

#advanced

Score: 65.0% (Checks completed: 100.0%)

Write a function that adds two numbers.

- Prototype: `char *infinite_add(char *n1, char *n2, char *r, int size_r);`
- Where `n1` and `n2` are the two numbers
- `r` is the buffer that the function will use to store the result
- `size_r` is the buffer size
- The function returns a pointer to the result
- You can assume that you will always get positive numbers, or `0`
- You can assume that there will be only digits in the strings `n1` and `n2`

- $n1$ and $n2$ will never be empty
- (/).
- If the result can not be stored in r the function must return 0

julien@ubuntu:~/0x06\$ cat 103-main.c

```
#include "main.h"
```

```

12. Noise is a buffer, more effective than cubicles or booth walls

[#advanced](#)

Score: 65.0% (Checks completed: 100.0%)

Write a function that prints a buffer.

- Prototype: `void print_buffer(char *b, int size);`
- The function must print the content of `size` bytes of the buffer pointed by `b`
- The output should print 10 bytes per line
- Each line starts with the position of the first byte of the line in hexadecimal (8 chars), starting with `0`
- Each line shows the hexadecimal content (2 chars) of the buffer, 2 bytes at a time, separated by a space
- Each line shows the content of the buffer. If the byte is a printable character, print the letter, if not, print `.`
- Each line ends with a new line `\n`
- If `size` is 0 or less, the output should be a new line only `\n`
- You are allowed to use the standard library
